

The background of the top section features a large Mexican flag on the right and a semi-transparent map of Mexico on the left. The map shows major cities like San Antonio, Dallas, Houston, and Mexico City. A dark grey box is overlaid on the map, containing the main announcement text.

# SPECIAL ANNOUNCEMENT! GREAT PROGRESS WITH FIBROMYALGIA, CFS, AUTISM, PARKINSONISM

**Nova Cells Institute**  
We Make A Difference Because We Care

## PEOPLE WITH FIBROMYALGIA-CFS, AUTISM, OR PARKINSON'S DISEASE, PLEASE LISTEN UP!

Nova Cells Institute scientists and doctors are continually doing experiments to improve life for people with all kinds of neurological & neuromuscular diseases. During the past year it has made substantial progress with:

- **Autism**
- **Fibromyalgia-Chronic Fatigue Syndrome**
- **Parkinson's disease**

What NCIM has discovered is that combination of a specific form of targeted stem cell therapy combined with IV infusions of our proprietary Beacon Factor (cytokine-protein hybrid molecule) plus daily intramuscular or subcutaneous injections of a recombinant human lymphokine (injected for 4 months & longer) **significantly reduced** pain, discomfort, and fatigue in patients with Fibromyalgia-CFS as well as improved social engagement and diminished repetitive behaviors in those with autism.

In addition, NCIM researchers and doctors found that a combination of its targeted stem cell therapy and regular infusions of its proprietary cytokine-protein Beacon Factor eliminated shaking, drooling and other symptoms in Parkinson's disease patients.

If you have any of the aforementioned conditions or a family member afflicted with one or more of them, please email or call NCIM now. Our US information phone # is **1-562-916-3410** and our email address is [NCInfodesk@gmail.com](mailto:NCInfodesk@gmail.com)
